

WORKSHOP

Cloudrise workshops bring stakeholders together to collectively understand the current state of your data-centric technologies and programs, assess use cases surrounding your people, processes, and technologies, and devise recommendations and a roadmap to address your business challenges.

CHALLENGES WE ADDRESS

Cloud-Native Workforce. Organizations are adopting cloud native applications and infrastructure to ensure network resiliency.

Propagation of Data. Enterprises tend to have limited insight into context, user behavior, and user action when leveraging sensitive or confidential data.

Any Device Anywhere. Organizational transformation, including an expansion of the remote workforce, has resulted in a larger device footprint.

Evolution of Threat Actors. Increased data and device usage has resulted in a larger attack surface and more sophisticated insiders and threats.

Teams at Odds. Security and infrastructure teams have competing priorities, are struggling with a multitude of siloed solutions, and are fighting for the same \$\$.

Too Many Tech Options. With so many data-centric tech options available, what is the best Proof of Concept/Value approach? Is one even needed?

SERVICES WE PROVIDE

- **Current state analysis** of your data-centric technologies and program(s).
- **Assessment** and understanding of existing use cases surrounding your people, process and technologies.
- Up to two **targeted stakeholder workshops** to understand the business requirements and technology vision.
- Up to two **working group interviews** to understand day-to-day operations.
- Approximate four-week engagement

OUTCOMES YOU MAY EXPECT

- **Summary of key findings** that are documented so that you may clearly understand the current state of the technology and program.
- Summary of **recommendations and high-level roadmap** to assist with getting on the correct path to realizing the full value of your technologies and mitigating data risk.

ABOUT CLOUDRISE

Cloudrise is a security services provider focused on protecting organizations' data - wherever it resides. Whether on-prem, in the cloud, or someplace in between, Cloudrise protects organizations' data throughout its entire lifecycle. We build, deploy, optimize, and manage data security programs and market-leading platforms.
