

Is your deployed technology singing?

Do you have a program to govern your tech stack, maximizing your investment, and ensuring your data and cloud environments are protected?

Cloudrise combines a deep knowledge of cloud and data security solutions with a thorough understanding of business use cases, technology deployment and integration, and contextual knowledge to make data and cloud security platforms “sing”.

Questions You Should Be Asking

If you have successfully (or unsuccessfully) deployed modern technology, such as Security Access Service Edge (SASE), Data Security Posture Management (DSPM), or a Cloud-Native Application Protection Platform (CNAPP), **can you confidently say you are getting the most from your investment?**

To take it a step further, **can your organization consume, prioritize, and act on** the outcomes of this innovative technology?

Why Organizations Need a Data Security Governance Program

Deploying an industry-leading technology solution is a great start, but without a program to govern the outcomes, most organizations are not prepared to **CONSUME** the results. A successful data security program governs your people, processes, and technology – maximizing the value of your technology investments with a program that utilizes all their capabilities.

With a goal of securing your data wherever it resides, Cloudrise security services will assist in maximizing the value of your SASE, DSPM, and/or CNAPP solutions and securing your data wherever it resides.

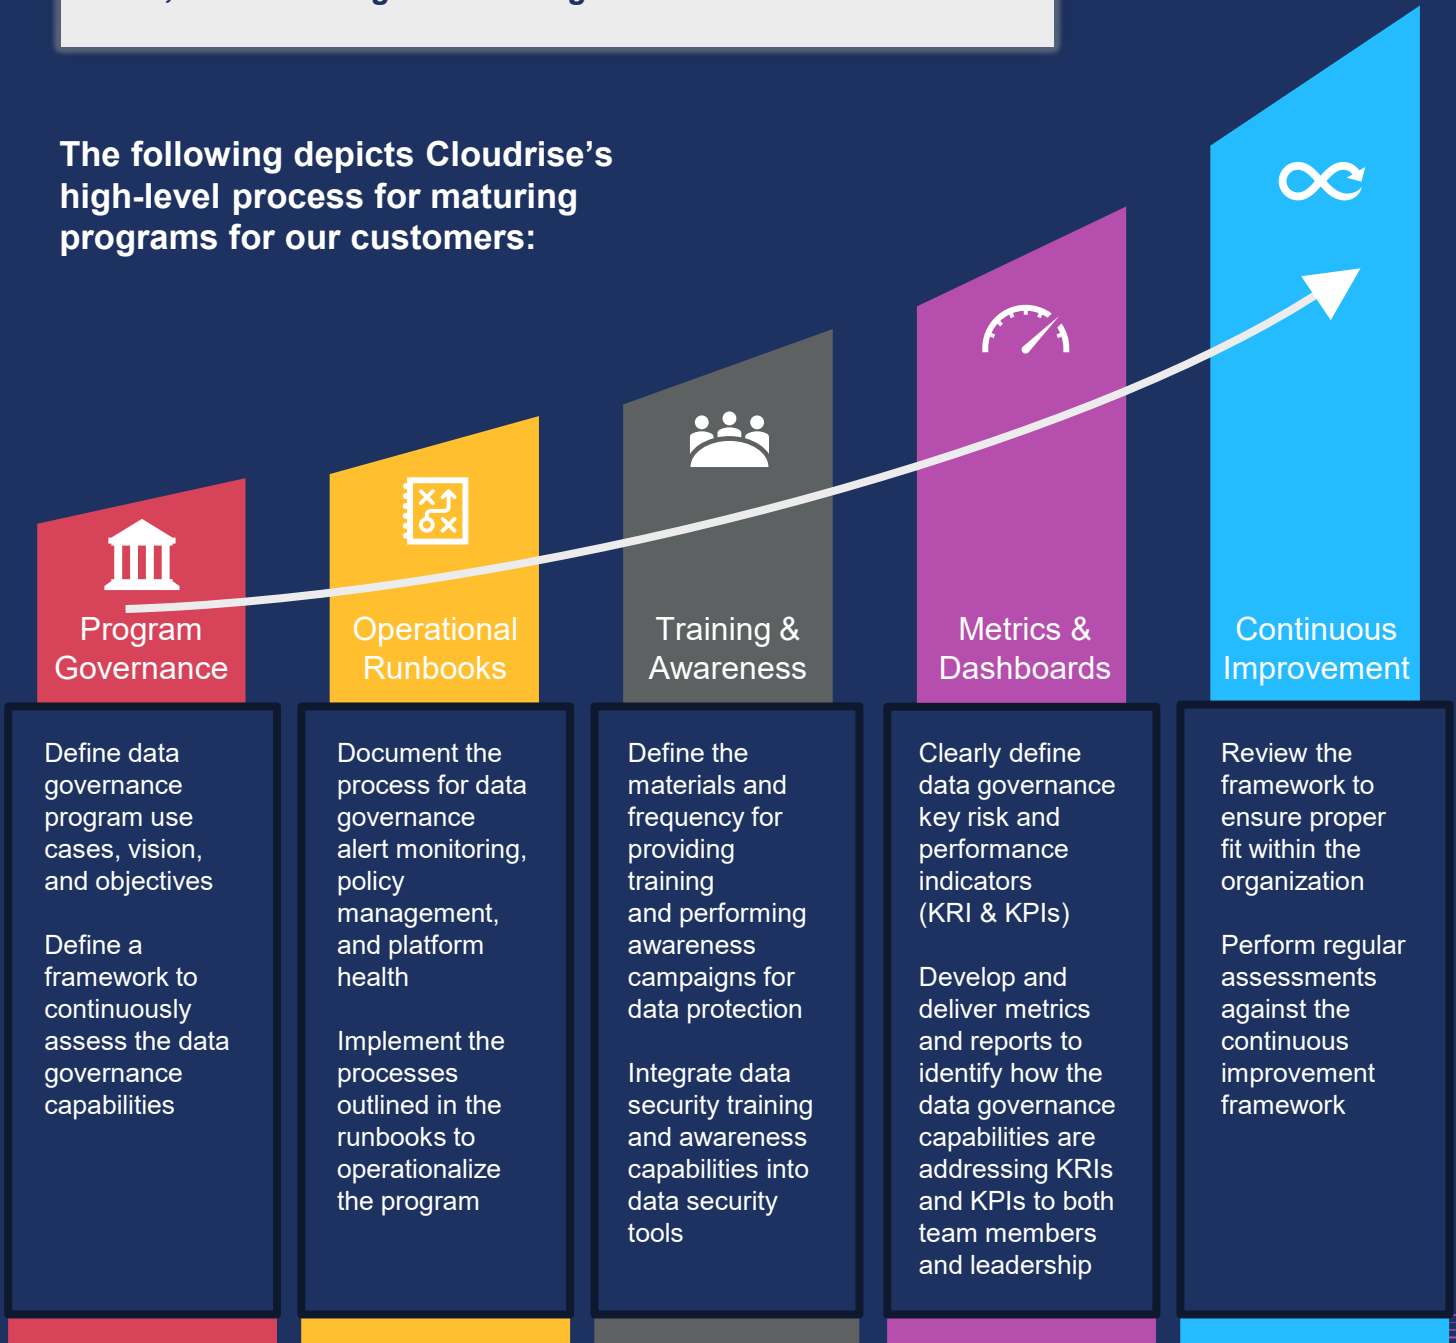

Our Services

We design, build, optimize and manage data security governance programs that drive people, tech decisions, and processes – and address the ever-changing data compliance and regulatory landscape. Programs are tailored to your business and include established responsibilities, policies, standards and controls to support risk reduction efforts.

What are the key factors of a successful program? The first is...programs are not static. They require careful thought, care, and nurturing in order to grow and mature.

The following depicts Cloudrise's high-level process for maturing programs for our customers:

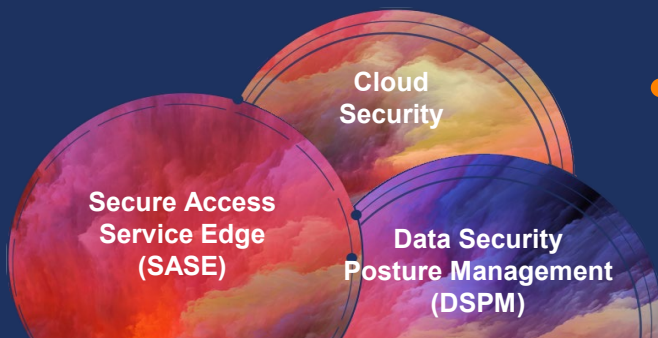

Expected Outcomes

- **Baselined current state** of your data risk
- **Increased visibility** of your data and cloud applications
- **Implemented technologies** that **integrate** to your tech ecosystem
- **Compliance** with your organization's business, tech, and regulatory requirements
- **Roadmap** outlining path to securing your data
- **Initial program developed** to address your data protection, privacy, and cloud security needs

A successful security program governs your people, processes, and technology – maximizing the value of your technology investments with a program that utilizes all their capabilities.

ABOUT CLOUDRISE

Cloudrise is a security services provider focused on protecting organizations' data wherever it resides. On prem, in the cloud, or anyplace in between, Cloudrise is an extension of the team, tailoring our scalable service model to security needs across the entire data lifecycle. We build, deploy, optimize, and manage data security programs on market-leading platforms. With centers of excellence in the US and UK, our experience spans industries, geographies, and organizational sizes, demonstrating the success of our innovative and proven security talent acquisition and retention solution.
