“My DSPM platform is deployed ... now what?”

Help! There is too much data to consume!

CUSTOMER CHALLENGES

How do I demonstrate value and cost savings from my DSPM technology?

What do best practices for a Data Discovery Program look like?

How do I plan, develop, and implement remediation efforts?

How do I know what to prioritize?

SERVICE

DATA SECURITY POSTURE MANAGEMENT (DSPM) OPTIMIZATION

- Gather information about existing program, regulatory, compliance and business needs
- Define use cases, success criteria, and remediation workflows to address findings and achieve security and compliance goals
- Assess, operationalize, expand or develop a data discovery program
- Use scanning results to tune & optimize processes for initial operating capacity
- Expand data sources and integration planning
- Develop and implement the remediation planning workflows
- Review and expand: operations, technology, workflows, compliance reporting, and KPIs to achieve full operating capability

EXPECTED OUTCOMES

- Use cases defined so there is a “true north” for prioritization, resulting in risk mitigation
- Processes to support initial operating capacity optimized
- Roadmap for full operating capability designed
- Value of DSPM deployment understood and realized
