

Where Security Services Lead the Way

A successful platform implementation is about more than the tech – it's about tailoring the tech to your business needs and optimizing its value.

Cybersecurity complexities are outpacing internal capabilities

90% of organizations report **unfilled or under-skilled cybersecurity positions**, even amid broader hiring slowdowns.¹

47% of organizations cite **lack of in-house expertise** as the **primary reason for using service providers**.²

~80% now prefer **co-managed or fully managed SASE models** due to integration, visibility, and policy complexity.³

Services matter as much as platforms...

Or more.

SASE spans networking + security teams requiring collaboration and alignment

DSPM requires continuous tuning as data and use cases expand and mature

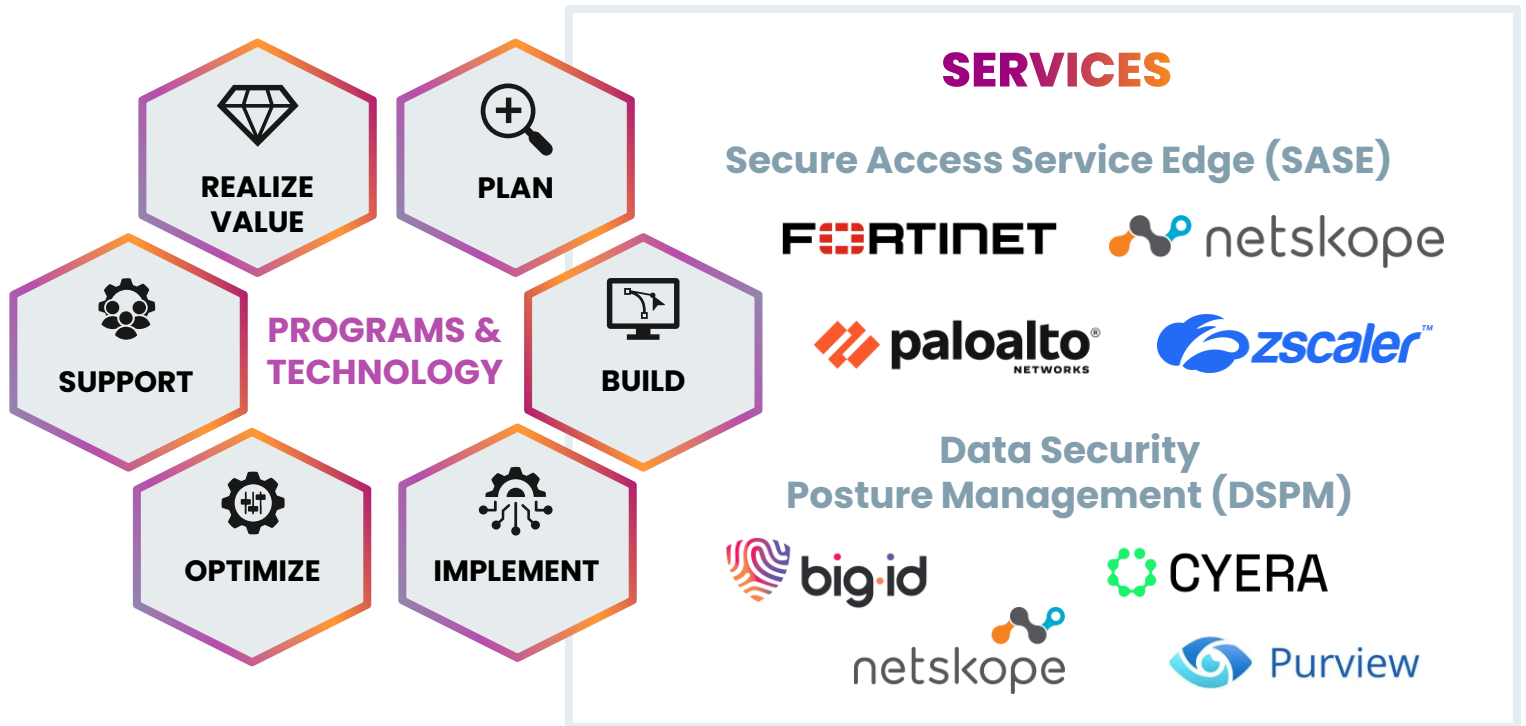

Zero Trust is never "done"—policies evolve with identity, apps, and risk

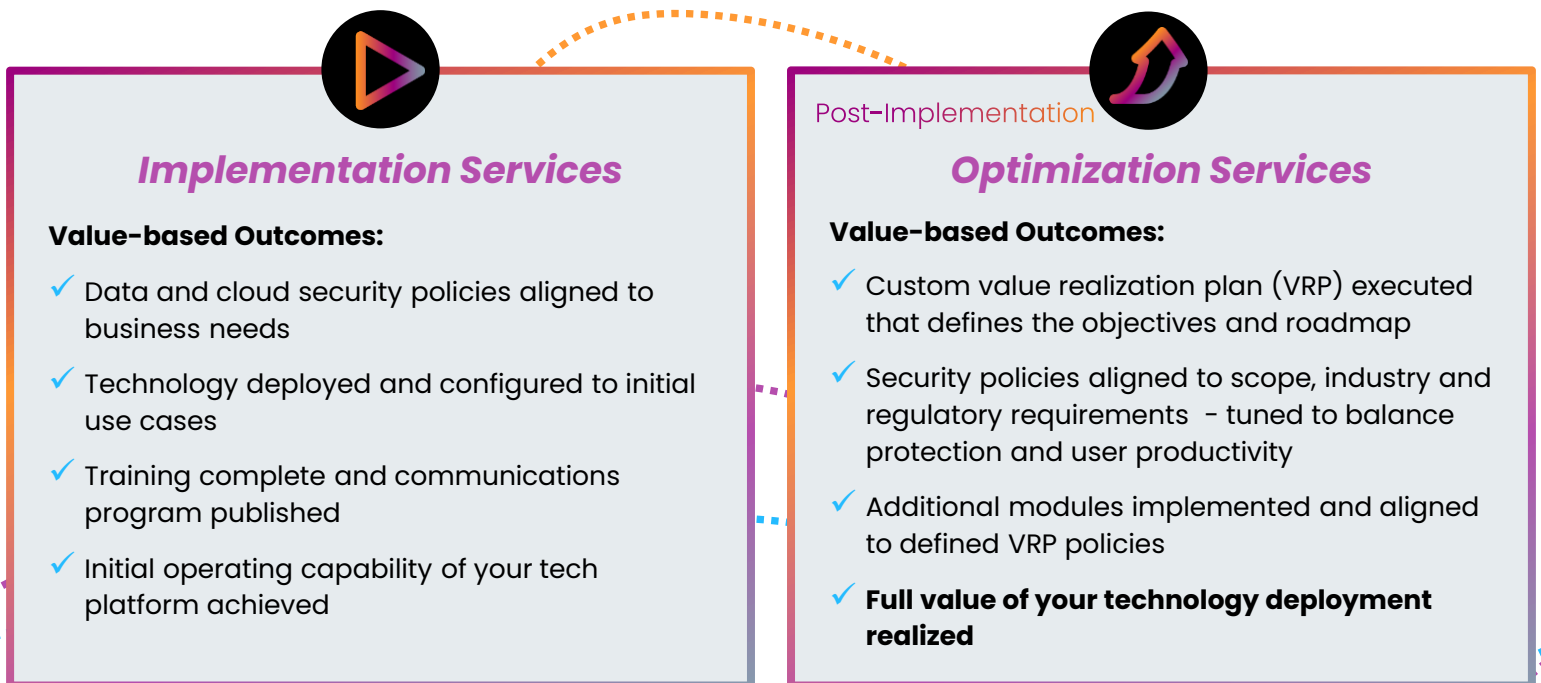

Cyber talent shortages are real, but do not need to be your reality

We partner with *industry-leading SaaS vendors.*

Services are critical to SaaS platform success

Security Services

for the modern SaaS stack.

We are an extension of your team.

Strength in numbers and global reach gives you an instant bench of expertise, so your business can grow without limits.

Services that encompass your security needs.

Services are delivered as a subscription and adapt to your evolving data security needs. We provide skilled experts as needed, ensuring the right capabilities at the right time.

Get more from your platform—quickly.

A successful platform implementation is about more than the tech. Maximize the value of your tech investment with a service provider that can turn your security strategy into measurable outcomes.
