

Fortinet Services

SOLUTION BRIEF — Implementation and Optimization Services for Fortinet

Exclusive Networks is your go-to team for world-class data, network, and cloud security services—delivering outcome-based solutions that maximize the value of your security investments. Acting as an extension of your team, we implement and optimize leading security platforms so you can focus on the business rather than the technology.

Our services for **Fortinet FortiSASE, FortiGate, FortiManager, FortiOS, and FortiAnalyzer** ensure organizations gain the benefits of convergence, performance, and simplified operations while building a data-centric security program that aligns to business outcomes.

THE CHALLENGE

Organizations today face rapidly expanding attack surfaces, fragmented architectures, and intensifying pressures from distributed work, cloud adoption, and fast-paced development cycles. These shifts make it difficult to enforce consistent controls, maintain visibility, and scale security operations without adding complexity.

Across the Fortinet platform, each solution addresses a specific dimension of this broader challenge:

FortiManager provides single-pane management for multiple Fortinet products, across diverse environments, all with one unified operating system, FortiOS. Customers benefit from centralized device management, real-time monitoring, and security policy based on best practices enforced consistently to all enterprise locations.

FortiSASE enables secure access to the web, cloud, and applications for the hybrid workforce, while simplifying operations. It combines FortiSASE cloud-delivered SSE with SD-WAN to extend the convergence of networking and security from the network edge to remote users.

FortiGate Next-Generation Firewalls protect data, assets, and users across today's hybrid environments accelerating security and networking performance to effectively secure the growing volume of data-rich traffic and cloud-based applications.

FortiAnalyzer enables centralized logging, analytics, and automation for Fortinet products from anywhere with an internet connection. The solution offers a wide range of services, including IOC, outbreak alerts, and security automation service.

FortiOS is the unified underlying OS used across integrated Fortinet products.

THE SOLUTION

Exclusive Networks helps organizations start with the most critical questions: Is your data and environment secure, and how do we protect it while enabling the business? We align people, processes, and technology around a unified security governance program that delivers meaningful results as environments, threats, and business needs evolve.

Our approach ensures Fortinet deployments are business driven, integrated, and scalable. We begin by reviewing your architecture and policy landscape, design a path to convergence, implement the right Fortinet solutions for your use cases, and optimize continuously to maintain strong governance and operational maturity.

Implementation Services

Our Implementation Services deploy your essential Fortinet capabilities quickly and effectively. We assess your current state, define measurable outcomes, identify quick wins, deploy initial solutions, establish governance, and configure policies to achieve initial operating capability across targeted platforms.

Value-based Outcomes

- ✓ Data and cloud security policies aligned to business needs
- ✓ Technology deployed and configured to initial use cases
- ✓ Training complete and communications program published
- ✓ Initial operating capability of your Fortinet platform achieved

Optimization Services

Our Optimization Services help you reach full operating capability and maximize the value of your Fortinet investment. We implement additional solutions, define insights that matter, tune policies, integrate with your technology ecosystem, and optimize both the platform and your governance program.

Value-based Outcomes

- ✓ Custom Value Realization Plan (VRP) executed that ensures your Fortinet environment continuously improves, adapts, and delivers measurable outcomes.
- ✓ Security policies aligned to scope, industry and regulatory requirements—tuned to balance protection and user productivity
- ✓ Additional modules implemented and aligned to defined VRP policies
- ✓ Full value of your Fortinet deployment realized

Where Security Services Lead the Way.

We deliver outcome-based services that maximize the value of your security stack. A successful platform implementation is about more than the tech – it's about a data security foundation tailored to your business needs.
